Organize Favorite Bookmarks for Quick Retrieval

Belkasoft announces “Belkasoft BookaMark” 2.02

Belkasoft announces today the unveiling of “Belkasoft BookaMark”, a slim bookmark manager for the Windows platforms. It provides a centralized location for your favorite bookmarks where they are organized into themed categories for quick access and retrieval. Similar to the best software in its class, the program delivers the Explorer-style interface, the powerful search facility and the ability to import bookmarks from a file, Internet Explorer, Mozilla and Opera favorites. Along with these options, the program sports a handful of extras to shine with.

Picture 1. Main Window. General view.

“New to “Belkasoft BookaMark” is a unique ability to import bookmarks from ICQ and Miranda,” says Alex Romanov, marketing communications manager at Belkasoft. “If you can’t find the link sent to you through ICQ, you can import ICQ history to our manager and take advantage of its powerful search facility. You shall get the lost link in a blink of an eye. Another good thing about BookaMark is that any bookmark can be assigned a specific hotkey combination so that you can open it at one key touch without leaving the browser window. It’s a great time saver because you don’t have to open the manager to browse for the bookmark you need if you remember its hotkey.”

“Customers will also discover the clipboard logging feature,” continues Mr. Romanov. “Our manager can monitor the content of clipboard. And if you copy a text with a link, it extracts the latter and saves it to the special program folder – “Clipboard log”. Similar to other BookaMark record, any “clipboard” bookmark contains additional information, including name, URL-address, description, date of creation and last visit. Along with expanding the import capabilities, we have added the export feature. So, if you use several browsers, you can import bookmarks from Internet Explorer and export them directly to Mozilla Firefox or Opera.”

Belkasoft BookaMark is remarkably easy in use. It has a clear, Explorer-style interface familiar to millions of Windows users. The main window is divided into two areas. The tree-like folder structure on the left allows you to open any folder whose records are immediately listed on the right. Clicking on any record, you can view bookmark properties in the area below. To open a bookmark, you need to double-click the appropriate record. With the same point-and-click simplicity, you can add or remove folders and open any bookmark record to edit its properties.

The search facility enables you to search for a particular string in the name, URL-address or description (wildcards supported). Added to this is the ability to search by date based on the specified time interval. Belkasoft BookaMark can also search bookmarks to identify duplicates. They are marked with a special icon in the bookmark list so that the user can see them immediately and delete unnecessary ones. You can import bookmarks from the browser, search and delete duplicates and export them back to the browser without any unnecessary data.

Pricing and Availability

Belkasoft BookaMark runs under Windows 98/2000/XP/2003 and costs \$19.90 (USD). Registered customers are entitled to free updates and lifetime technical support. An evaluation version of the program is available as a free download at <http://belkasoft.com/download/BBM202.zip>.

About Belkasoft

Belkasoft is an independent software developer from Russia. The company was established in 2002 by a team of software engineers who graduated from Saint Petersburg State University. We specialize in bookmark management software for the Windows platforms. Along with our flagship Belkasoft BookaMark manager, we are also known as the co-author of DefragMentor Premium, a powerful defragmentation product (<http://defragmentor.com/dmp/en/home.asp>). For more information about us and our software, please visit <http://belkasoft.com>.
